**ORGANIC FUEL CELLS AND FUEL CELL CONDUCTING SHEETS**

Examiner: Yuan

S.N. 10/664,772

Art Unit: 1745

January 24, 2006

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-35,48-50, drawn to an organic fuel cell, classified in class 429, subclass 12.
  - II. Claims 36-41, drawn to a method for making an organic fuel cell, classified in class 429, subclass 13.
  - III. Claims 42-47, drawn to a method for modifying fuel cell carbon cloth, classified in class 429, subclass 40.

The inventions are distinct, each from the other because of the following reason:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). As admitted in the subject matter of the present claims, the method can be used to make four distinct direct organic fuel cells as recited in claims 1-16,17-23,24-35 and 48-50, respectively.

3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

inventions have different modes of operation. Invention III recites a method to make a fuel cell carbon cloth, which can be used in other type of fuel cells, including PEM and direct oxidation fuel cells. Therefore, the inventions are distinct.

4. If invention I is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention.

I-1, Claims 1-16, drawn to a direct organic fuel cell comprising a power density of at least  $15 \text{ mW/cm}^2$  when operating at room temperature.

I-2, Claims 17-23, drawn to a direct organic fuel cell comprising an anode enclosure containing an organic fuel solution that is at least 1.8 M formic acid.

I-3, Claims 24-35, drawn to a direct organic fuel cell comprising an anode enclosure that promotes circulation of the liquid organic fuel solution through movement of gas through the organic fuel solution.

I-4, Claims 48-50, drawn to a direct organic fuel cell comprising carbon cloth on one or both of the anode and cathode.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dah-Wei D. Yuan whose telephone number is (571) 272-1295. The examiner can normally be reached on Monday-Friday (8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan, can be reached on (571) 272-1292. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
